

Dear Hiring Team,

I am writing to express my interest in the Engineering Intern position at Carousell Group.

I am currently a sixth-semester Information Systems student with experience in backend and fullstack web development using technologies such as Next.js, NestJS, Node.js, TypeScript, PostgreSQL, and FastAPI. Through both academic and personal projects, I have developed a strong interest in building scalable systems and understanding how modern web applications work beyond just writing code.

One of the projects I built is OrbiChat, an AI-powered chatbot platform with a multi-service architecture using Next.js, NestJS, and FastAPI. Working on this project helped me better understand concepts such as API design, authentication, backend orchestration, AI service integration, and scalable application architecture.

I enjoy learning how systems work internally and understanding the reasoning behind technical decisions. Rather than only focusing on implementation, I am curious about why certain features are designed in specific ways and how engineering decisions impact product scalability and user experience.

While my current experience is mainly within the Node.js ecosystem, I am highly interested and open to learning Go. I am comfortable adapting to new technologies and continuously improving my understanding of backend engineering, system design, and software development fundamentals.

I am excited about this opportunity because it aligns closely with my interest in collaborative engineering environments where I can continue learning while contributing to real products used by real users.

Thank you for your time and consideration. I would welcome the opportunity to further discuss how my experiences and interests align with your team.

Sincerely,

Ubay Dillah
